Data Extraction

Posted 8 days ago

2 required Connects (50 available)

We would like to scrape the business listing details from this website: <https://wellbooki.com/>

There are 31 pages and 10 business listings per page: <https://wellbooki.com/search/online/1>

In an excel spreadsheet, for every listing, we would like:

- Listing name
- Listing address
- URL of listing

\$30

Fixed-price

\$

Entry level
