

Webscraper Needed

Data Extraction

Posted 7 hours ago

2 required Connects (50 available) ?

Hi I need each listing under these apartments for rent scraped. I would like the Title, Location, Address, Seller, Price, Description and Pictures. There are many pages hence I am looking for a solution and tool for you to recommend vs getting downloading all yourself. An ideal output would be an excel and folders for each link in google drive, named by the title. I want to then upload these using All import on wordpress.
